Luz Lopez Marcano

Parkville, MD | (201) 852-4313 | l.lopezmarcano4@gmail.com | LinkedIn | GitHub | Portfolio

Skills

Languages: TypeScript, JavaScript, C#, SQL, HTML, CSS
Frontend: React.js, Next.js, Vue, Nuxt 3, Tailwind CSS, shadcn/Radix UI, Zustand, Pinia, Vite, accessibility (WCAG 2.1 AA)
Backend & Data: .NET 8/10 (ASP.NET Core), EF Core, REST APIs, SignalR, PostgreSQL (Postgres), MySQL
Tools & Integrations: Stripe, Twilio, OpenAI and Anthropic APIs, Docker, CI/CD, Playwright, Cypress, Vitest

Experience

Frontend Team Lead, LOJI — Jan 2025 – Present

- Manage 2 junior developers; introduced code standards, a PR template, and QA practices that made code reviews and releases more consistent.
- Owned SEO and discoverability across TavernScribe and LOJI's product marketing sites: JSON-LD structured data, sitemaps, per-page keywords, llms.txt files, and Google Search Console setup and monitoring.

TavernScribe

- Lead frontend engineer and major backend contributor on a subscription product that turns recorded game sessions into AI-generated recaps, newspapers, and timelines; built the core UI in Next.js, React, and TypeScript, with themes and a mobile redesign.
- Built Stripe monetization end to end in C#/.NET and React: embedded checkout, billing portal, signed webhooks, subscriptions, affiliate coupons, and promo codes with atomic redemption.
- Built resumable direct-to-S3 uploads for large session recordings, storing upload state in the database so uploads survive across multiple server instances.
- Led a Next.js App Router migration (single-page app for the product, static generation for marketing), cut the largest page from 1,660 to 442 lines, and fixed WCAG contrast failures.

Insurance Call Center Platform

- Led the Power Dialer: Twilio answering-machine detection, voicemail drop, conference bridging, and a standalone softphone window synced to the app (Nuxt 3, Vue, SignalR, .NET).
- Built carrier quoting and underwriting integrations and workflow handlers for automated client journeys; fixed a call-outcome race condition with atomic database updates.

FIPP Coaching Logs

- Main developer on a multi-organization React and .NET 10 web app that replaced the client's Excel coaching workbooks; ported their fidelity-scoring logic to a backend engine and shipped it to production.
- Led WCAG 2.1 AA accessibility compliance for the app, including screen reader and zoom support; built multi-org roles, license enforcement, and a cross-tab idle timeout.

Junior Frontend Developer, LOJI — Aug 2024 – Jan 2025

- Primary frontend developer on a federal SBIR supply-chain risk tool: built the parts inventory table (editable columns, saved filters, server-side pagination), risk-over-time charts, and supplier maps (Next.js, TypeScript, Mapbox GL, ECharts).
- Built a multi-step simulation builder with a drag-and-drop node editor on a Mapbox map and animated timeline playback.

Software Engineer, Bloomberg Industry Group — Jan 2023 – Feb 2024

- Led the migration and deployment of two repositories to a single-spa micro-frontend architecture, improving site performance and maintainability.
- Shipped front-end features behind feature toggles for phased rollouts, working with QA, the tech lead, and product management to release on deadline.

Education

Catalyte – Software Engineering Apprenticeship — Sep 2022
